TOMATO

A packet will produce about 100 plants; an ounce 3,500 plants, enough for an acre.

✻ 651 Maule's Earliest of All

80 days. The Most Prolific, Meatiest, Large, Extra Early Red Tomato Grown

(Bright red.) Maule's Earliest of All is the very earliest tomato to ripen its first fruits and it continues to furnish marketable tomatoes much longer than other very early varieties. An invaluable sort for the home garden and none the less valuable for the market gardener or shipper. It is all its name implies, namely: **the earliest tomato in existence**, notwithstanding the claims made for June Pink, Earliana, Wayahead, Chalk's Early Jewel, John Baer, etc.

Nor is its extreme earliness its only virtue, for it is of large size, which holds up well throughout its growing season, good color, and delicious flavor. It does not crack and has no large core. Color is a bright red; at times, it grows a little irregular in shape, but never rough.

Pkt., 15 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 45 cts.; $\frac{1}{4}$ lb., \$1.40; lb., \$4.75; 5 lbs., \$22.50, postpaid.

✻ 653 Maule's Magnificent

110 days. The Popular Large, Smooth Red Sort, Producing Tomatoes Until Frost

(Bright red.) Never before has any tomato been grown so successfully in all sections of the country as Maule's Magnificent. In different soils and various climatic conditions it came out with flying colors. The name, suggested by one of our customers, expresses in one word how really good it is, and it certainly well deserves the name of Magnificent. The vines give larger crops than other tomatoes of equal acreage. The fruit is large, solid and smooth. Ready to pick in 110 days. If you want an abundant crop of solid, smooth bright red, meaty tomatoes that will be large and good, send for Maule's Magnificent. It is a good shipper, does not crack or rot; unsurpassed for the home garden, market or for canning.

656 Maule's Enormous Tomato

✻ 656 Maule's Enormous

110 days. The Largest Red Tomato
The Sweetest of All

(Deep red.) Maule's Enormous Tomato, bred by Mr. Miesse, was first introduced to the public by us under the name "Eight to the Yard." Maule's Enormous, however, was not bred merely for large size. The name was selected from the fact that it seemed to apply better to this wonderful tomato than to any other. In comparative trials with other sorts, under ordinary conditions, Maule's Enormous has made a record for both quality and quantity, while the beauty of the fruit makes it an easy and quick seller in all markets. The fruit is remarkably solid and firm. Enormous is now universally recognized as a standard main crop red tomato, of great size and productive ability. Ready for the table or market in about 110 days.

Pkt., 15 cts.; $\frac{1}{2}$ oz., 35 cts.; oz., 60 cts.; $\frac{1}{4}$ lb., \$1.75; lb., \$6.00; 5 lbs., \$28.75, postpaid.

Customers may order half pounds at the pound rate; 2 pounds or over at the 5 pound rate

110 Days. Very Large; Solid Red Flesh Sort, Wonderful Cropper. The Greatest Tomato for Market, Home Garden or Canning

(Bright red.) Columbia is a very large, smooth tomato, well-formed and deep from stem to blossom. It is of a bright red color and ripens up to the stem; flesh is solid, with very few seeds. The foliage is larger and much heavier than Matchless. It is a wonderful bearer, outyielding many of the best cropping sorts. Tomatoes run more uniform than any other variety, and it does not have as many small fruits in the latter part of the season, a fact that will be greatly appreciated by all growers. Ready to pick in 110 days. Splendid for market gardeners, home gardeners or canners wanting a strictly large, fancy tomato.

Pkt., 10 cts.; ½ oz., 25 cts.; oz., 40 cts.; ¼ lb., \$1.10; lb., \$4.00; 5 lbs., \$18.75, postpaid.

* 652 Maule's Success

100 days. The Best Main Crop Tomato. Bears the Bulk of Its Fruits When the Crop of Maule's Earliest of All Begins to Decline. Unexcelled for Home Use. Unrivalled for Shipping. The Best for Canning.

(Bright red.) Maule's Success Tomato is smooth, well formed and extremely deep. It ripens evenly to the stem, and is without ridges or cracks; has great meatiness and few seeds. It is firm without being hard; an unrivalled home tomato and an unequalled shipper. The vines are vigorous but compact. The joints are short and it always fruits in large clusters at every second joint, which accounts for its wonderful productiveness. Its brilliant red color, depth and solidity make it the handsomest main crop tomato we have ever seen. On the market stall it sells in preference to all other sorts. Its unusual solidity, few seeds and desirable form make it the most desirable canning variety known. The largest growers of tomatoes for canning and market purposes are all enthusiastic about Maule's Success.

Droughtproof Yellow Dent produces handsome ears of good size and symmetrical shape with the largest grains and the smallest cob of any Yellow Dent corn. Grains are deep wedge shaped and of the brightest golden yellow color. The stalks average about 9 feet in height. We do not hesitate to say that, all points considered—its beautiful color, long yellow grains, large ears—taking all points combined, it is the finest yellow corn ever introduced, and each customer who gives it a trial will be fully convinced that it is the best 90 to 100 day corn he ever planted.

The different varieties listed on the following pages are designated either as Annuals, Biennials or Perennials.

Hardy Annuals. Easily raised and suitable for many purposes; excellent for cutting; invaluable for bedding, some for color, others for foliage effect. They will always be popular with those who want quick results with the least expenditure of time and money. Seed may be started in the open ground in early spring or sown indoors for earlier effect. Plants will flower and die in the one season.

Half Hardy Annuals. Seeds should be sown in boxes in the house or in hot-beds during March or April and the plants set out in the open ground in May. They will flower for the one season and die.

Hardy Biennials. Sow seed as you would the hardy annual. The plants will not bloom until the following year, after which they die.

Half Hardy Biennials. Seed should be sown as you would the half hardy annuals. The plants require protection during the winter. They will bloom and die the following season.

Hardy Perennials. Seeds may be sown in early spring, or during July and August to produce plants that will flower the next season, and continue to bloom each succeeding year. Seed of some hardy perennials, if sown very early, will produce plants that will bloom the same season. It is unnecessary to give protection to these plants during the winter, but it will prove beneficial to the plants if a covering of leaves, litter or straw manure is provided. A hardy bed or border, when once established, requires practically no attention and will, if varieties have been properly selected and arranged, provide an abundance of flowers from early spring until frost.

Half Hardy Perennials. Sow seed as you would the half hardy annuals. If plants are set out in the open ground they must be lifted before frost, potted up and taken in the house during the winter.

MAULE'S GIANT AMERICAN ASTERS Hardy Annual

In recent years we have paid particular attention to American grown Asters, for they have greatly increased the popularity of this flower. We know of no other flower so easily raised from seed, which combines so much beauty with grace and usefulness and are more satisfactory than Asters. They make a brilliant effect when grown in masses and furnish a constant supply of cut flowers. On our second cover page we illustrate six sorts in colors. Every garden, large or small, should contain Asters.

991 PACIFIC BEAUTY. A new variety of the Crego type, with immense flowers, the petals of which are long, wide and gracefully curled. The color is a beautiful shade of rich lavender. MAULE'S GIANT PANSIES (Heartsease) Hardy Biennial

For many years, in fact ever since we have been in business, we have given particular attention to Pansy seeds, until we really think our strains of Pansies are as good as can be found anywhere in the world. Pansies demand good soil, thriving best in a cool, moist but well drained position. Do not plant Pansies in the shade of a tree or building, as this causes straggly plants with very few blooms.

Seed sown in April or May will produce blooming plants the last of June, which will continue flowering until the end of the season. For early spring blooming, sow seeds in July, August or early September in the open ground or cold frame. They are quite hardy, but we recommend giving them a slight protection with straw, leaves or coarse litter during the winter. We know that the results obtained from our Pansy seeds have been so remarkable that this is the reason the demand for this beautiful and popular flower increases with us so much every year.

Maule's Bulbs, Roots, Etc.

Everyone succeeds in growing plants from Maule's bulbs and roots. With but little care, excellent results may be obtained. After flowering, many bulbs or roots, if given a period of rest, may be re-planted, when the previous year's display will be repeated. This of course applies to varieties that are not hardy. The hardy roots of Lilies, Iris, Peonies, etc., when once planted will live outdoors for years without being disturbed. A good supply of bulbs or roots may be obtained at a very moderate cost, for the first cost is practically the only expense.

With every order for bulbs or roots a copy of our Booklet, "Practical Hints on Bulb Culture," will be enclosed free. It contains many helpful suggestions on the culture of bulbs and roots. By following the simple directions given everyone should succeed in growing beautiful plants.

DELPHINIUM

The culture of Delphiniums is exceedingly simple. They thrive in almost any position, a rich friable loam suits them finely; but any soil, even hot and sandy, if well watered and manured will give excellent results. Placed in lines, as a background to a border, or in groups of, say, three plants at intervals, the effect of the Delphinium is exceedingly fine.

BELLADONNA

The turquoise-blue color of the bloom is not equalled for delicacy and beauty by any other flower. Plants grow about 3 feet high.

BELLAMOSA

Has the same free and continuous blooming qualities as Belladonna but the blooms are rich, deep blue. Just as desirable for cutting or garden decoration.

EDULIS SUPERBA

Beautiful, brilliant rose-pink with silvery reflex. Early, fragrant; very free bloomer. One of the very best pinks for Memorial Day. A wonderful cut-flower.

75 cts. each; 2 for \$1.25; 6 for \$3.50, postpaid

FELIX CROUSSE

One of the best reds. Large, globular shaped bloom of brilliant, dazzling red with ruby flamed center. Fragrant, blooms freely; fiery, bright and effective.

\$1.25 each; 2 for \$2.25; 6 for \$6.50, postpaid

FESTIVA MAXIMA

The most popular white. Pure white; with a few center petals prominently flecked crimson; outer petals sometimes faint lilac-white on first opening. Early; fragrant.

75 cts. each; 2 for \$1.25; 6 for \$3.50, postpaid

MAD. EMILE GALLE

Soft lilac-pink; center shaded soft flesh and cream, fading to rosy-white. Very delicate coloring. Large, cup-shaped flowers.

MARIE LEMOINE

Pure white with cream-white center; a few inner petals occasionally tipped carmine. Large, fragrant flowers on sturdy, erect stems. A free and sure bloomer. Where delicacy and refinement are desired, this variety will appeal to all.

\$1.00 each; 2 for \$1.75; 6 for \$5.00, postpaid

(Hardy Perennial Larkspur)

A succession of flowers may be expected from spring to early autumn, especially if the spikes which have flowered early are cut down to the ground; fresh growth will then be produced which will give blossoms. Watering in summer will increase size of spike and flower. Plants increase in size and in beauty, and often in quantity, year after year.

GOLD MEDAL HYBRIDS

Immense spikes of the most beautiful flowers of every imaginable shade of blue, varying from the palest silvery-blue to the deepest indigo.

Any of the three varieties of Delphinium, 25 cts. each; 3 for 65 cts.; 6 for \$1.20; \$2.25 per dozen, postpaid.

MAULE'S LARGE FLOWERING CANNAS

For bedding purposes, Cannas stand at the head of the list.
